Re: City of Sarasota - Traffic Calming Plan
Subject: Speed Study Technical Memorandum

1. INTRODUCTION

The City of Sarasota (henceforth referred to as the City) has contracted with RK&K to develop a Traffic Calming Plan, focused on evaluating roadways within the City limits. The objective is to develop evaluation criteria for local, collector and arterial streets to identify the need for traffic calming measures. This would also include a city-wide speed study aimed at supporting speed limit adjustments made throughout the City.

The purpose of this document is to present the preliminary results of the city-wide speed study, and the methodology utilized to perform the analysis. The speed study extended throughout the City's municipal boundaries, presented in **Figure 1**. The study included local, collector and arterial roadways.

2. DATA COLLECTION

2.1. StreetLight Data

The data collection effort included obtaining 85th percentile speed data from the StreetLight Analytics platform. StreetLight is an on-demand mobility analytics platform, which utilizes big data from mobile devices to support analysis like origin-destination matrices, travel time and speed studies. The platform provides speed data segregated by day of the week and time of day. The 85th percentile speed along a roadway represents the speed at or below which 85 percent of vehicles are observed to travel. It is often used in traffic engineering to help determine safe and reasonable speeds for roadways and to establish speed limits.

2.1.1. Volume Data

Traffic volume data was also obtained from the StreetLight Analytics platform. The data was obtained along the same roadways as the 85th percentile speeds. The volume data was downloaded as annual average daily traffic (AADT) for the entire year of 2024 and is provided in map format in **Appendix A**.

Pedestrian and bicycle volume data was also obtained from StreetLight for the most recent available year (2023). This data was retrieved for seventeen (17) Census Tract Zones (determined by the United States Census Bureau) within the City boundaries and was sorted by daily pedestrian/bicycle volume. Pedestrian and bicycle volume data maps are provided in **Appendix A**.

2.2. Additional Data Sources

Additional data sources utilized as part of the speed study included:

1. City of Sarasota Context Classification map
2. City of Sarasota Private Streets and Street Vacations maps
3. City of Sarasota Code of Ordinances, Article VII, Schedule I: Speed Limits

City of Sarasota context classification and functional classification maps are provided in **Appendix B**.

2.2.1. Vehicle Spot Speed Data

Vehicle spot speed data (field data) was collected at locations where Streetlight data was unavailable at specific locations within the City Boundaries. The data was collected on May 1st, 2025 at the following locations:

- Bird Key Drive from John Ringling Causeway to south of Spoonbill Way
- Hillview Street from S Osprey Avenue to US 41
- Laurent Place, north and south of Hillview Street

2.2.2. Crash Data

Crash data was provided by the City for the 5-year period between January 2019 and December 2023. Historic crash data was utilized to identify crash clusters and locations with crashes involving vulnerable roadway users (pedestrians and bicycles), as well as fatal crash locations. The crash data was utilized to create three (3) maps showing the following:

1. Heatmap – showing all crashes
2. Pedestrian and bicycle crash locations
3. Fatal crash locations

The crash data maps are provided in **Appendix C**.

3. SPEED STUDY

3.1. Analysis Methodology

The methodology for the speed study was based on a comparison of existing posted speed limits along local, collector and arterial roadways (based on the City's Code of Ordinances) to the 85th percentile speed data obtained from StreetLight or spot speed data for the study segments.

The following parameters were used when acquiring the StreetLight data:

1. Time Periods:
   - January 1st to December 31st, 2024, for yearly average analysis
   - January 1st to April 30th, 2024, for peak season analysis
2. Day Type:
   - Typical weekday (Tuesday, Wednesday, Thursday)
   - Weekend (Saturday and Sunday)
3. Day Parts:
   - 12:00 AM to 6:00 AM
   - 6:00 AM to 9:00 AM (Weekday Morning Peak Period)
   - 9:00 AM to 3:00 PM
   - 3:00 PM to 7:00 PM (Weekday Afternoon Peak Period)
   - 7:00 PM to 12:00 AM

The existing posted speed limits were compared to their corresponding 85th percentile speed within each day type and day part. The goal was to identify roadway segments in which the recorded 85th percentile speed was above the posted speed limit and by how much.

In addition, a speed limit comparison focused only on roadways with functional classification of "Local" was performed. For this particular analysis, it was assumed that the local roadways all have a speed limit of 20 miles per hour (MPH) instead of their existing posted speed limit and then compared to the 85th percentile speeds.

The analysis did not include private roads and dead-end road segments where StreetLight 85th percentile speed data was not available or where the 85th percentile speed was equal to 0 MPH for all day types and all day parts. Most of these segments are 500 feet long or shorter (with a few exceptions), and because they are dead-end roads with limited connectivity with the nearby streets, 85th percentile speeds are generally expected to be equal or lower to the current posted speed limit.

3.2. Analysis Results

The speed analysis results were processed utilizing Geographic Information System (GIS) software and laid out as maps. The maps identify the current roadway segments where 85th percentile speed falls within the following thresholds.

- At or Below speed limit
- Between 0 and 5 miles per hour over the posted speed limit
- Between 5 and 10 miles per hour over the posted speed limit
- Over 10 miles per hour over the posted speed limit

Four (4) sets of maps were developed for this speed study and are provided in this document's Appendix as follows:

1. Average speed comparison between 85th percentile speeds and currently posted speed limits, provided in **Appendix D**.
2. Average speed comparison between peak season (January-April) 85th percentile speeds and currently posted speed limits, provided in **Appendix D**.
3. Average speed comparison between 85th percentile speeds and local roads assuming a posted speed limit of 20 MPH, provided in **Appendix E**.
4. Average speed comparison between peak season (January-April) 85th percentile speeds and local roads assuming a posted speed limit of 20 MPH, provided in **Appendix E.**

In addition, the raw data utilized to develop the speed comparison maps is provided in **Appendix F**.

4. CONCLUSION AND RECOMMENDATION

Based on the guidance from Florida Department of Transportation's Speed Zoning for Highways, Roads and Streets in Florida, *"With rounding, the posted speed limit should not differ from the 85th percentile speed or upper limit of the 10 mph pace (whichever is less) by more than 3 mph. Speed limits of more than 8 mph below the 85th percentile speed are not authorized"*. In addition, posted speed limits should be set in multiples of 5 MPH.

Due to the speed data collection effort being conducted mostly utilizing the StreetLight platform, the 10 MPH pace data which is the 10 MPH band of travel speeds containing the largest number of observed vehicles was not collected. Therefore the 85th percentile speed from Streetlight was utilized to determine if speed limit adjustments were suitable as selected local roadways.

Based on the results from the speed study, the existing 85th percentile speeds at several local roadways within the City are below 20 MPH; however, the posted speed limit on majority of those local roads is 25 MPH. Based on these findings, it is recommended that posted speed limit be set to 20MPH for roadway segments which have an existing 85th percentile speed at or below 20 MPH. A map showing the local road segments with 85th percentile speeds at or below 20 MPH is provided in **Appendix G**.

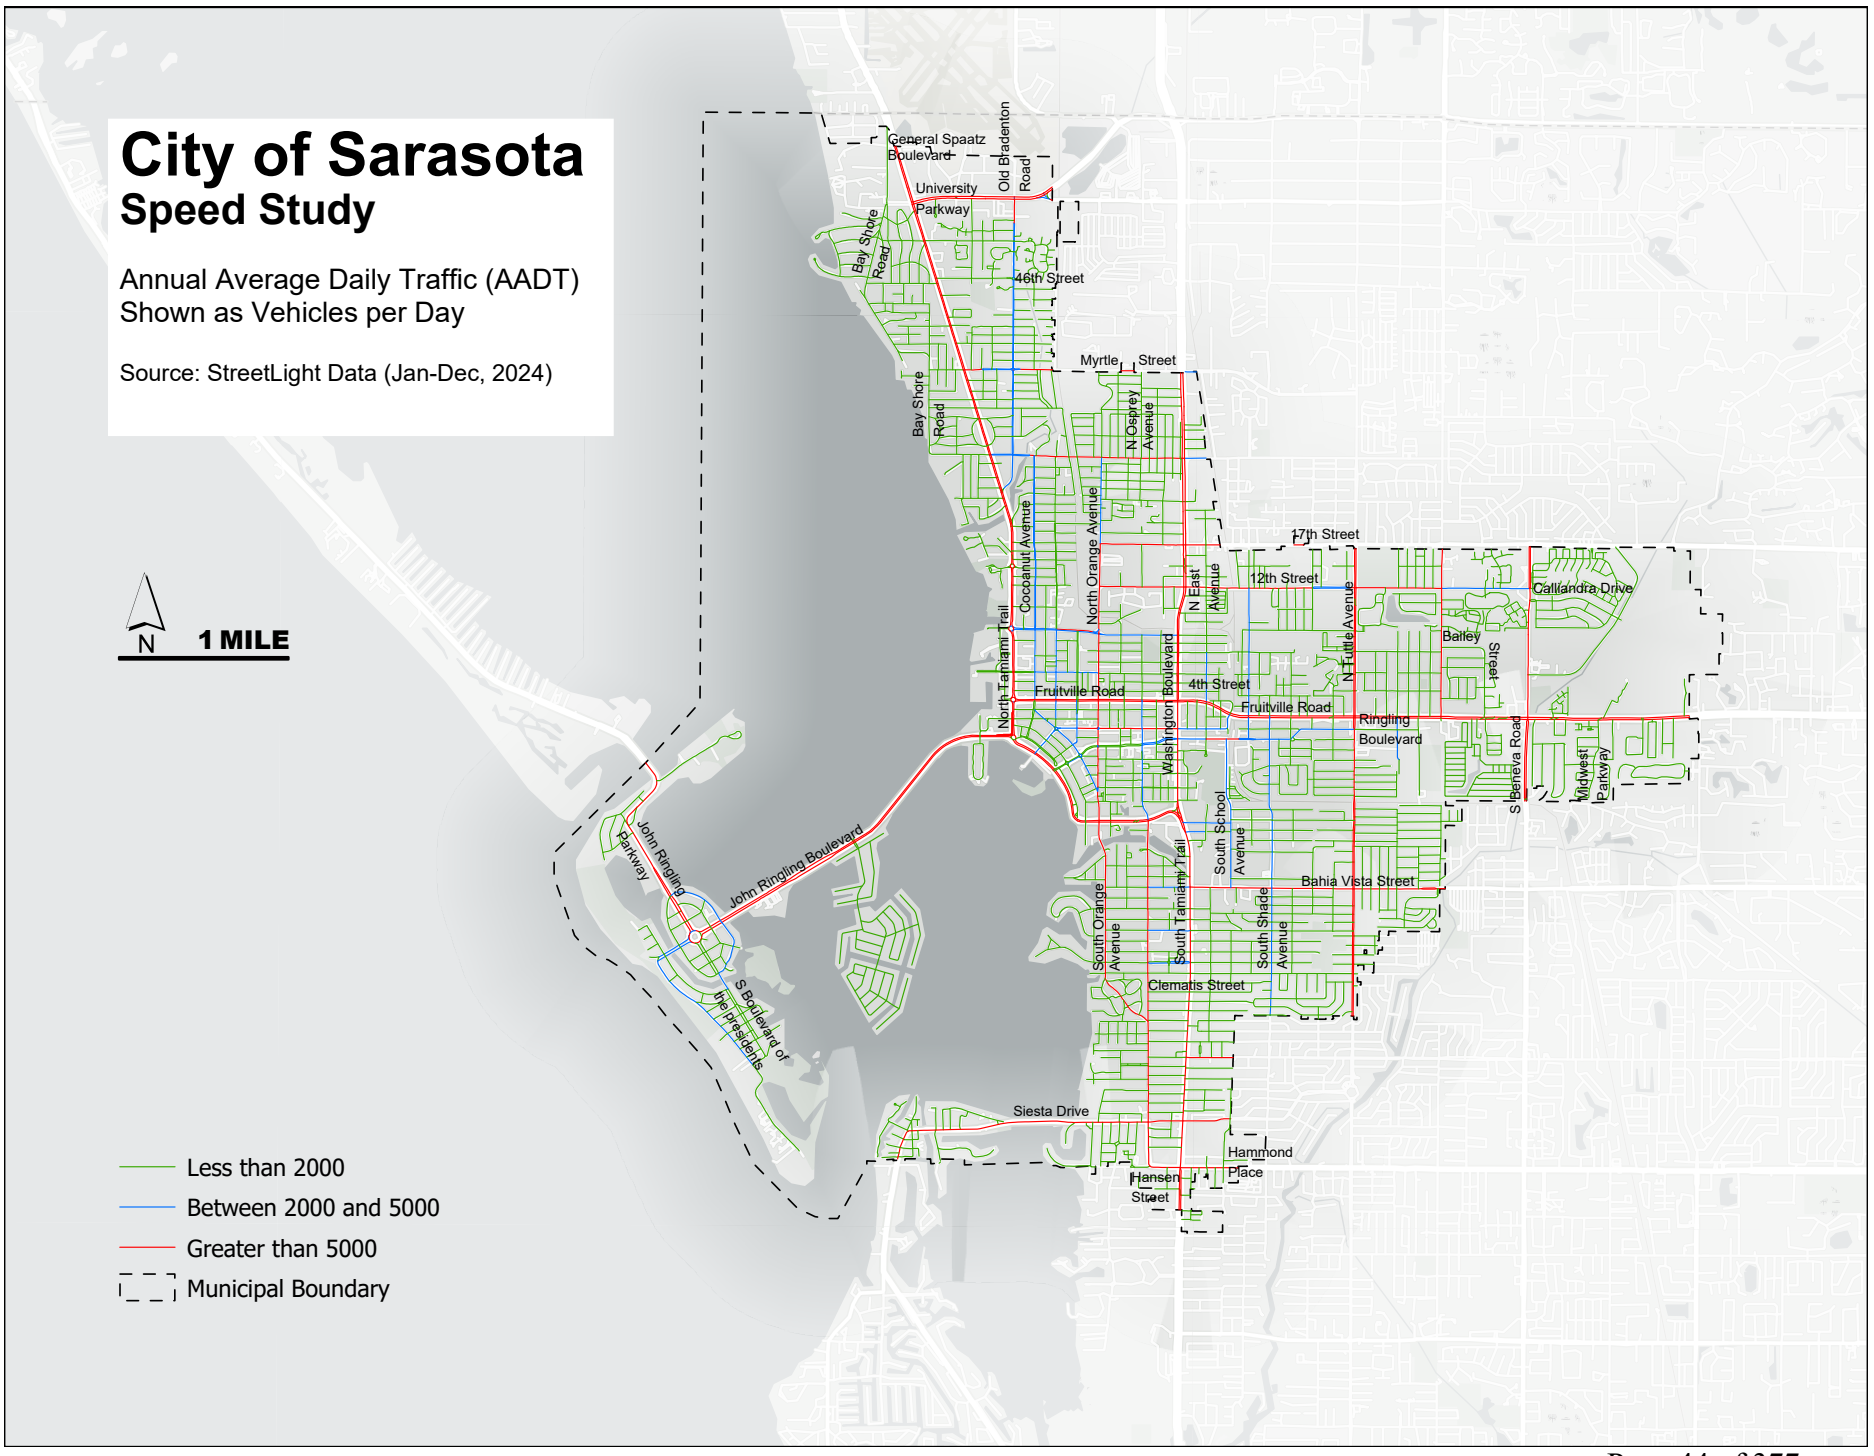

The field collected spot speed data is provided in **Appendix H**.
