January 17, 2025

The Board of Trustees
City of Sarasota Police Officers' Pension Fund
Sarasota, Florida

The results of the September 30, 2024 Annual Actuarial Valuation of the City of Sarasota Police Officers' Pension Fund are presented in this report.

The contribution rate in this report is determined using the actuarial assumptions and methods disclosed in Section D of this report. This report includes risk metrics in Section A but does not include a more robust assessment of the risks of future experience not meeting the actuarial assumptions. Additional assessment of risks was outside the scope of this assignment.

This report was prepared at the request of the Board and is intended for use by the Pension Fund (Plan) and those designated or approved by the Board. This report may be provided to parties other than the Plan only in its entirety and only with the permission of the Board. GRS is not responsible for unauthorized use of this report.

The purposes of the valuation are to measure the Plan's funding progress, to determine the employer contribution rate for the fiscal year ending September 30, 2026, and to provide the actuarial information for Governmental Accounting Standards Board (GASB) Statements No. 67 for the fiscal year ending September 30, 2024. This report also includes estimated GASB Statement No. 67 information for the fiscal year ending September 30, 2025. This report should not be relied on for any purpose other than the purposes described herein. Determinations of financial results associated with the benefits described in this report, for purposes other than those identified above may be significantly different.

This valuation assumed the continuing ability of the plan sponsor to make the contributions necessary to fund this plan. A determination regarding whether or not the plan sponsor is actually able to do so is outside our scope of expertise and was not performed.

The findings in this report are based on data or other information through September 30, 2024. The valuation was based upon information furnished by the City and/or auditor concerning Plan benefits, financial transactions, plan provisions and active members, terminated members, retirees and beneficiaries. We checked for internal and year-to-year consistency, but did not audit the data. We are not responsible for the accuracy or completeness of the information provided by the City or auditor.

In addition, this report was prepared using certain assumptions approved by the Board and prescribed by the Florida Statutes as described in the section of this report entitled Actuarial Cost Method, Assumptions and Definitions. The prescribed assumptions are the assumed mortality rates detailed in the Actuarial Assumptions and Methods section in accordance with Chapter 112.63, Florida Statutes. All actuarial assumptions used in this report are reasonable for purposes of this Valuation. The combined effect of the assumptions, excluding the prescribed assumptions or methods set by law is expected to have no significant bias (i.e. not significantly optimistic or pessimistic).

This report was prepared using our proprietary valuation model and related software which in our professional judgment has the capability to provide results that are consistent with the purposes of the valuation and this report and has no material limitations or known weaknesses. We performed tests to ensure that the model reasonably represents that which is intended to be modeled.

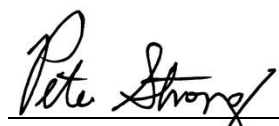

This report has been prepared by actuaries who have substantial experience valuing public employee retirement systems. To the best of our knowledge the information contained in this report is accurate and fairly presents the actuarial position of the Retirement Plan as of the valuation date. All calculations have been made in conformity with generally accepted actuarial principles and practices, with the Actuarial Standards of Practice issued by the Actuarial Standards Board and with applicable statutes.

Peter N. Strong and Nicolas Lahaye are members of the American Academy of Actuaries and meet the Qualification Standards of the American Academy of Actuaries to render the actuarial opinions contained herein. The signing actuaries are independent of the plan sponsor.

This actuarial valuation and/or cost determination was prepared and completed by us or under our direct supervision, and we acknowledge responsibility for the results. To the best of our knowledge, the results are complete and accurate. In our opinion, the techniques and assumptions used are reasonable, meet the requirements and intent of Part VII, Chapter 112, Florida Statutes, and are based on generally accepted actuarial principles and practices. There is no benefit or expense to be provided by the plan and/or paid from the plan's assets for which liabilities or current costs have not been established or otherwise taken into account in the valuation. All known events or trends which may require a material increase in plan costs or required contribution rates have been taken into account in the valuation.

Gabriel, Roeder, Smith & Company will be pleased to review this valuation and Report with the Board of Trustees and to answer any questions pertaining to the valuation.

Respectfully submitted,

Peter N. Strong, FSA, MAAA, FCA
Enrolled Actuary No. 23-06975
Senior Consultant & Actuary

Nicolas Lahaye, FSA, MAAA, FCA

Consultant & Actuary

SECTION A

VALUATION RESULTS AND COMMENTARY

Actuarial Valuation Process

An actuarial valuation is the process by which a balance between revenues (participant contributions, employer contributions and investment income) and obligations (benefits and expenses) is determined and funded condition is measured.

The flow of activity constituting the valuation may be summarized as follows:

- A. Covered person information about:
 - each person receiving pension payments
 - each former participant with a vested pension not yet payable
 - each former participant who is not vested and has not claimed a member contribution refund
 - each active participant
- B. Financial Information (assets, revenues, and expenditures)
- C. Benefit Provisions (Retirement Ordinance)
- D. Actuarial Assumptions about the volume and incidence of future activities
- E. Actuarial Cost Method (entry age) for allocating benefit costs to time periods
- F. Mathematical linking of the person information, financial information, benefit provisions, experience estimates and actuarial cost method
- G. Determination of:
 - contribution rate for the plan year
 - current funded condition

Items A, B and C are furnished by the pension office and constitute the current knowns about the Fund. Since the majority of activities will occur in the future, estimates must be made about these future activities (Item D).

Under the Entry Age Actuarial Cost Method, each year's differences between projected and actual Fund activities (experience gains/losses), decrease/increase the Unfunded Actuarial Accrued Liability. This treatment of experience gains/losses leaves the Normal Cost unaffected by year to year experience fluctuations and is thereby more likely to satisfy the level percent-of-payroll Funding Objective set out on page B-1. Normal Cost changes occur only in response to changes in benefits, actuarial assumptions and/or age at hire patterns.

Observed Experience

The City's approximate contribution requirement for the fiscal year beginning October 1, 2025 is 40.28% of payroll compared to 44.32% for this fiscal year beginning October 1, 2024 (and 44.72% for the fiscal year ending September 30, 2024). The equivalent dollar contribution is projected to be \$8.04 million for the fiscal year ending September 30, 2026 compared to \$7.96 million for the fiscal year ending September 30, 2025.

The funded ratio, as measured by the ratio of the funding value of assets to the actuarial accrued liabilities, is 91.1%, compared to last year's 88.9%.

Overall actuarial experience during the fiscal year ending September 30, 2024 was favorable. The key elements of the experience were as follows:

- The rate of return on the funding value of assets was 8.6% versus the projected 6.5% (favorable). The return based on the market value of assets was 20.7%.
- Average salaries increased by 11.1% versus an average increase of 6.6% expected (unfavorable).
- 10 terminations versus 8 expected (slightly favorable).
- 2 retirements versus 7 expected (favorable).
- 3 retiree deaths, 2 of whom have continuing beneficiaries, so 1 net, with a reduction of \$134,940 in retiree payroll, versus approximately 6 deaths expected and an expected reduction of \$384,982 in retiree payroll (unfavorable).

The net result of all fiscal and demographic activity was an experience gain of \$4,245,010. This caused a decrease in the total adjusted contribution requirement of 1.73% of covered payroll.

The City's underlying contribution rate was also affected by the net effect of demographic changes impacting normal cost and fluctuations in Chapter 185 receipts. One of these demographic changes is the change in covered pensionable payroll. Covered pensionable payroll was \$17,522,311 as of September 30, 2023 and is \$19,482,193 as of September 30, 2024, which is an 11.2% increase. The unfunded actuarial liability is being amortized as a level dollar amount, so the 11.2% increase in covered payroll has caused the amortization payment on the unfunded actuarial liability, when expressed as a percentage of pay, to be approximately 2.2% of pay lower this year than it was otherwise expected to be.

Pension payroll is now 91.7% of active participant payroll (down from 98.7% last year). In the absence of a growing workforce, this percentage is expected to gradually increase with the passage of time. The contribution requirement anticipates continuation of this trend.

Actuarial Assumptions and Methods

There have been no changes in Assumptions and Methods since the last valuation.

Changes in Plan Provisions

There have been no changes in Plan Provisions since the last valuation.

Relationship to Market Value

The market value of assets exceeds the funding value of assets by \$15,941,126 as of September 30, 2024. If the market value had been the basis for the valuation, the City contribution rate for the fiscal year ending September 30, 2026 would have been 33.78% and the funded ratio as of September 30, 2024 would have been 95.7% (versus 84.1% last year).

Variability of Future Contribution Rates

The Actuarial Cost Method used to determine the contribution rate is intended to produce contribution rates which are generally level as a percent of payroll. Even so, when experience differs from the assumptions, as it often does, the employer's contribution rate can vary significantly from year-to-year.

Over time, if the year-to-year gains and losses offset each other, the contribution rate would be expected to return to the current level, but this does not always happen.

As mentioned above, covered payroll as of the valuation date increased from the previous valuation date. This caused the amortization payments to be lower this year as a percentage of covered pay than they were expected to be.

In the absence of future assumption changes or experience gains/losses, the required City contribution is expected to decrease toward a range of \$7.0 to \$7.5 million as a dollar amount over the next few years (and may fall below \$7 million by fiscal year 2030) as the gains on the market value of assets continue to be phased in. This is a large reduction from last year's projected future range of \$8.5 to \$9.0 million, primarily due to the 20.7% return on the market value of assets earned during fiscal year 2024.

RISKS ASSOCIATED WITH THE MEASURING THE ACCRUED LIABILITY AND ACTUARIALLY DETERMINED CONTRIBUTION

The determination of the accrued liability and the actuarially determined contribution requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the accrued liability and the actuarially determined contribution that result from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Asset/Liability mismatch – changes in asset values may not match changes in liabilities, thereby altering the gap between the accrued liability and assets and consequently altering the funded status and contribution requirements;
3. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future accrued liability and contributions differing from expected;
5. Longevity risk – members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
6. Other demographic risks – members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future accrued liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be expected to increase (or decrease). Likewise if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rate shown on page B-2 may be considered as a minimum contribution rate that complies with the Board's funding. The timely receipt of the actuarially determined contributions is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

PLAN MATURITY MEASURES

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of members in pay status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

	2024	2023
Ratio of the market value of assets to total payroll	16.9	16.0
Ratio of actuarial accrued liability to payroll	17.7	19.0
Ratio of actives to retirees and beneficiaries	0.7	0.7
Ratio of net cash flow to market value of assets	-2.1%	-2.8%

RATIO OF MARKET VALUE OF ASSETS TO PAYROLL

The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the market value of assets is 2.0 times the payroll, a return on assets 5% different than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in plan sponsor contributions as a percentage of payroll. We note that this ratio for Sarasota Police (16.9) is higher than it is for most other plans we work with, which means the required contributions as a percentage of payroll are more volatile than most other plans.

RATIO OF ACTUARIAL ACCRUED LIABILITY TO PAYROLL

The relationship between actuarial accrued liability and payroll is a useful indicator of the potential volatility of contributions for a fully funded plan. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the actuarial accrued liability is 2.5 times the payroll, a change in liability 2% other than assumed would equal 5% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also plan sponsor contributions) as a percentage of payroll. We note that this ratio for Sarasota Police (17.7) is higher than it is for most of the plans we work with, which means the changes in liability and required contributions as a percentage of payroll are more volatile than most other plans.

RATIO OF ACTIVES TO RETIREES AND BENEFICIARIES

A young plan with many active members and few retirees will have a high ratio of active to retirees. A mature open plan may have close to the same number of actives to retirees resulting in a ratio near 1.0. A super-mature or closed plan may have significantly more retirees than actives resulting in a ratio below 1.0. This ratio for Sarasota Police is less than 1.0, indicating it is super-mature (there are more retirees than active members).

RATIO OF NET CASH FLOW TO MARKET VALUE OF ASSETS

A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a super-mature plan or a need for additional contributions.

ADDITIONAL RISK ASSESSMENT

Additional risk assessment is outside the scope of the annual actuarial valuation. Additional assessment may include scenario tests, sensitivity tests, stochastic modeling, stress tests, and a comparison of the present value of accrued benefits at low-risk discount rates with the actuarial accrued liability.

LOW-DEFAULT-RISK OBLIGATION MEASURE

Actuarial Standards of Practice No. 4 (ASOP No. 4) was revised and reissued in December 2021 by the Actuarial Standards Board (ASB). It includes a new calculation called a low-default-risk obligation measure (LDROM) to be prepared and issued annually for defined benefit pension plans. The transmittal memorandum for ASOP No. 4 includes the following explanation:

“The ASB believes that the calculation and disclosure of this measure provides appropriate, useful information for the intended user regarding the funded status of a pension plan. The calculation and disclosure of this additional measure is not intended to suggest that this is the “right” liability measure for a pension plan. However, the ASB does believe that this additional disclosure provides a more complete assessment of a plan’s funded status and provides additional information regarding the security of benefits that members have earned as of the measurement date.”

The following information has been prepared in compliance with this new requirement. Unless otherwise noted, the measurement date, actuarial cost methods, and assumptions used are the same as for the funding valuation covered in this actuarial valuation report.

A. Low-default-risk Obligation Measure of benefits earned as of the measurement date: \$489,666,844

B. Discount rate used to calculate the LDROM: 3.81% based on Bond Buyer “20-Bond GO Index” as of September 26, 2024

C. Other significant assumptions that differ from those used for the funding valuation: none

D. Actuarial cost method used to calculate the LDROM: Individual Entry-Age Actuarial Cost Method

E. Valuation procedures to value any significant plan provisions that are difficult to measure using traditional valuation procedures, and that differ from the procedures used in the funding valuation: none

F. Commentary to help the intended user understand the significance of the LDROM with respect to the funded status of the plan, plan contributions, and the security of participant benefits: The LDROM is a market-based measurement of the pension obligation. It estimates the amount the plan would need to invest in low risk securities to provide the benefits with greater certainty. This measure may not be appropriate for assessing the need for or amount of future contributions. This measure may not be appropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan’s benefit obligation.

The difference between the two measures (Valuation and LDROM) is one illustration of the savings the sponsor anticipates by taking on the risk in a diversified portfolio.

Chapter Revenue

The “Base Amount” is the amount of Chapter 185 State money received for calendar year 2002 (in 2003). This amount is \$773,572. All State Chapter money received up to this amount will be used to fund the pension plan (to offset the City’s required contribution). Any State Chapter money in excess of this amount will be divided evenly between the City and the Share Plan.

Actuarial Confirmation of the Use of State Chapter Money	
1. Base Amount (2002 Premium Tax Revenue):	\$ 773,572
2. Amount Received for Previous Plan Year:	968,921
3. Growth Amount for Previous Year: (2) - (1), not less than zero	195,349
4. Amount Used to Fund Plan: [Lesser of (1) and (2)] plus 50% of (3)	871,246
5. Amount Used to Fund Share Plan: 50% of (3)	97,675
6. Accumulated Excess as of Valuation Date:	0

SECTION B

DETAILED VALUATION RESULTS

Funding Objective

The funding objective for the Pension Fund is to establish and receive contributions, expressed as percents of active participant covered payroll, which are generally level from year to year when funding assumptions are realized and benefits are unchanged. This objective meets the requirements of Part VII, Chapter 112, Florida Statutes.

Contribution Rates

The Pension Fund is supported by participant contributions, City contributions, Chapter 185 Florida Statutes receipts, and investment income on Pension Fund assets.

Contributions which satisfy the funding objective are determined by the annual actuarial valuation and are sufficient to:

- (1) cover the costs allocated to the current year (normal cost) by the actuarial cost methods described in Section D; and
- (2) finance over a period of future years the actuarial costs not covered by present assets and anticipated future normal costs (unfunded actuarial accrued liability).

Initial financing periods used for the valuation are:

30 years for experience gains and losses occurring after 9/30/02 through 9/30/16; 25 years for experience gains and losses occurring after 9/30/16.
25 years for benefit changes occurring after 9/30/02;
25 years for global actuarial assumption/method changes occurring after 9/30/02;
10 years for actuarial assumption/method changes occurring after 9/30/02 that apply only to retirees;

Contribution requirements for the fiscal years beginning October 1, 2024 and October 1, 2025 are shown on page B-2.

Contributions to Finance Benefits of the Pension Fund

Contributions for Fiscal Year Ending	Contributions Expressed as Percents of Active Member Payroll for Fiscal Year Ending	
	9/30/2026	9/30/2025
	% of Pay	% of Pay
Normal Cost		
Service pensions	23.46 %	23.55 %
Disability pensions		
Service connected	6.00	6.02
Non-service connected	0.95	0.96
Pre-retirement survivor pensions		
Service connected	0.33	0.34
Non-service connected	0.04	0.04
Termination Benefits		
Deferred service pensions	1.70	1.72
Refunds of member contributions	0.66	0.66
Total Normal Cost	33.14 %	33.29 %
Unfunded Actuarial Accrued Liability	17.91 %	22.09 %
Administrative Expenses	1.59 %	1.45 %
Total Contribution Requirement	52.64 %	56.83 %
Member portion	8.00 %	8.00 %
Chapter 185 Portion *	4.36 %	4.51 %
City portion #	40.28 %	44.32 %
Estimated City Portion in Dollars (millions)	\$ 8.04	\$ 7.96
Expected covered payroll in contribution year (millions)	\$ 19.97	\$ 17.96

* Based on estimate of respective fiscal year's payroll; if actual payroll is more than estimated, then City's portion will increase accordingly.

Please refer to page B-8 for a schedule of financing periods.

The Pension Ordinance specifies a minimum City contribution of 8% of payroll.

FS 112.64 requires City contributions to be deposited not less frequently than quarterly. Member contributions, which are in addition to the City contributions, must be deposited immediately.

FS 185.11 requires that Chapter 185 monies be deposited within 5 days of receipt.

Procedures for determining dollar contribution amounts are shown on page B-3.

Comparative contribution amounts for prior fiscal years are shown on page B-9.

Determining Dollar Contributions

For any period of time, the percent-of-payroll contribution rate needs to be converted to dollar amounts. We recommend that the City continues its current use of the following procedure.

Contribute dollar amounts at the end of each payroll period which are equal to the City's percent-of-payroll contribution requirement multiplied by the **active participant covered payroll** for the period. This amount may need to be adjusted at the end of the year to reflect the actual Chapter 185 contribution available to fund the Plan as a percentage of the actual participant covered payroll. This adjustment is made to ensure the total City plus State contribution equals 44.64% of covered pay for the fiscal year ending September 30, 2026.

Adjustments should be made as necessary to exclude items of pay that are not covered compensation for Pension Fund benefits and to include non-payroll amounts that are covered compensation for Pension Fund benefits.

Funding Progress Indicators

There is no single all-encompassing measure of a pension plan's funding progress and current funded status.

A traditional indicator has been the relationship of the funding value of assets to actuarial accrued liability - a measure that is influenced by the choice of actuarial cost method. This relationship is shown on page B-7.

We believe a better understanding of funding progress and status can be achieved using the following indicators which are less dependent on the actuarial cost method:

Indicator (1) - The gains or losses realized in the operation of the Pension Fund. Gains and losses are expected to cancel each other over a period of years but sizable year to year fluctuations are common. Further details on the derivation of the gain (loss) are shown on page B-6.

Indicator (2) - The ratio of the funding value of assets to the actuarial accrued liability using the entry age actuarial cost method. The ratio is expected to increase over time but the basic trend may be interrupted by benefit improvements and market volatility.

Indicator (3) - The ratio of the unfunded actuarial accrued liability to valuation payroll. In a soundly financed pension fund, the amount of the unfunded actuarial accrued liability will be controlled and prevented from increasing in the absence of benefit improvements. The ratio is expected to decrease over time but the basic trend may be interrupted by benefit improvements.

Funding Progress Indicators - Historical Comparison (\$Amount in millions)

Valuation Date	Indicator (1)	Indicator (2)			Indicator (3)		
	Gain (Loss)	Funding Value of Assets	AAL	Percent Funded	Unfunded AAL	Active Participant Payroll	Ratio to Payroll
September 30, 1993	\$ 0.36	\$ 44.28	\$ 42.90	103.2 %	\$ (1.38)	\$ 7.75	(17.8) %
September 30, 1994	(0.98)	48.20	48.75	98.9	0.55	7.93	6.9
September 30, 1995	2.65	54.44	52.42	103.9	(2.02)	8.15	(24.8)
September 30, 1996	1.86	61.86	58.11	106.5	(3.75)	8.28	(45.3)
September 30, 1997	5.40	72.39	63.50	114.0	(8.89)	8.57	(103.7)
September 30, 1998	4.97	83.94	71.44	117.5	(12.50)	9.00	(138.9)
September 30, 1999	7.35	95.36	78.27	121.8	(17.09)	9.45	(180.7)
September 30, 2000	(5.17)	104.93	92.67	113.2	(12.26)	10.13	(121.0)
September 30, 2001	(3.98)	108.12	99.83	108.3	(8.29)	9.93	(83.4)
September 30, 2002	(7.67)	106.61	108.59	98.2	1.98	10.23	19.4
September 30, 2003	(9.17)	103.45	116.01	89.2	12.56	10.78	116.5
September 30, 2004	(8.03)	110.36	123.77	89.2	13.41	10.50	127.7
September 30, 2005	(0.95)	119.64	134.05	89.3	14.41	11.06	130.3
September 30, 2006	1.94	129.48	141.98	91.2	12.50	11.65	107.3
September 30, 2007	1.70	142.17	152.66	93.1	10.49	12.11	86.6
September 30, 2008	(1.77)	149.20	161.04	92.6	11.84	11.73	100.9
September 30, 2009	(5.79)	153.44	170.84	89.8	17.40	11.05	157.5
September 30, 2010	(6.32)	155.91	187.61	83.1	31.70	10.51	301.6
September 30, 2011	(8.31)	154.85	202.22	76.6	47.37	10.38	456.4
September 30, 2012	(5.88)	154.43	218.38	70.7	63.95	9.41	679.6
September 30, 2013	(0.42)	160.73	225.74	71.2	65.01	9.28	700.5
September 30, 2014	3.81	173.32	235.82	73.5	62.50	9.69	645.0

SECTION C

SUMMARY OF BENEFIT PROVISIONS AND VALUATION DATA

Summary of Provisions Considered for Actuarial Valuation (as of September 30, 2024)

A. Ordinances

Plan established under the Code of Ordinances for the City of Sarasota, Florida, Chapter 24, Article II, and Division 3 and was most recently amended under Ordinance No. 24-5528. The Plan is also governed by certain provisions of Chapter 185, Florida Statutes, Part VII, Chapter 112, Florida Statutes and the Internal Revenue Code.

B. Effective Date

November 16, 2009 (Restatement).

C. Plan Year

October 1 through September 30

D. Type of Plan

Qualified, governmental defined benefit retirement plan; for GASB purposes it is a single employer plan.

E. Eligibility Requirements

All actively employed full-time police officers participate in the plan as a condition of employment, exclusive of the Chief of Police who may elect not to participate.

F. Credited Service

Service is measured as the total number of years and fractional parts of years for which a police officer made Member Contributions to the plan. No service is credited for any periods of employment for which the member received a refund of their contributions.

G. Compensation/Salary

The total compensation for services rendered to the City as a police officer reportable on the member's W-2 form, plus all amounts deferred under deferred compensation plans, but excluding allowances for clothing and equipment and all lump sum payments paid at the time of retirement or termination except lump sum payments of retroactive pay received pursuant to the provisions of a negotiated union contract. Beginning October 1, 2012, salary shall exclude pay for overtime worked after that date in excess of 300 hours in any calendar year.

H. Final Average Compensation (FAC)

For members eligible for normal retirement as of September 30, 2012, one-twelfth of the average Compensation for the highest 3 years out of the last 10 years of Credited Service prior to termination or retirement.

For members not eligible for normal retirement as of September 30, 2012, one-twelfth of the average Compensation for the highest 5 years out of the last 10 years of Credited Service prior to termination or retirement. In no event shall average Compensation for members employed prior to October 1, 2012 be less than one-twelfth of the average salary of the highest 3 years out of the last 10 years of Credited Service ending September 30, 2012.

I. Normal Retirement

Eligibility: A member may retire at the earlier of:

- (1) age 50 and 10 years of Credited Service, or
- (2) 25 years of Credited Service regardless of age.

Benefit: 3.0% of FAC multiplied by years of Credited Service. Benefit is limited to 100% of FAC and the provisions of Internal Revenue Code Section 415.

Normal Form
of Benefit:

For members eligible for normal retirement as of September 30, 2012, a lifetime annuity with automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death. Spousal benefits are payable for life. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible child. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student. Optional forms of benefits are also available.

For members not eligible for normal retirement as of September 30, 2012, a lifetime annuity automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death for benefits attributable to service performed prior to October 1, 2012, and a 10 year certain and life thereafter annuity for benefits attributable to service performed after September 30, 2012. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. Optional forms of benefits are also available.

J. Early Retirement

Not Applicable

K. Delayed Retirement

Same as Normal Retirement taking into account compensation earned and service credited until the date of actual retirement.

L. Service Connected Disability

Eligibility: Any member who becomes totally and permanently disabled as a result of an act occurring in the performance of service for the City is immediately eligible for a disability benefit.

Benefit: Accrued Normal Retirement Benefit on the date of disability calculated using the greater of actual Credited Service or 25 years.

**Normal Form
of Benefit:**

For members eligible for normal retirement as of September 30, 2012, a lifetime annuity with automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death. Spousal benefits are payable for life. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible child. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

For members not eligible for normal retirement as of September 30, 2012, a lifetime annuity automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death for benefits attributable to service performed prior to October 1, 2012, and a 10 year certain and life thereafter annuity for benefits attributable to Service performed after September 30, 2012. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. Optional forms of benefits are also available.

COLA: Each service-connected disabled retiree and surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year.

M. Non-Service Connected Disability

Eligibility: Any member who becomes totally and permanently disabled is immediately eligible for a disability benefit.

Benefit: 2.75% of FAC multiplied by years of Credited Service up to a maximum of 40 years. In addition, each eligible child is also paid 5% of the member's last monthly salary.

**Normal Form
of Benefit:**

For members eligible for normal retirement as of September 30, 2012, a lifetime annuity with automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death. Spousal benefits are payable for life. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible child. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

For members not eligible for normal retirement as of September 30, 2012, a lifetime annuity automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death for benefits attributable to service performed prior to October 1, 2012, and a 10 year certain and life thereafter annuity for the benefits attributable to service performed after September 30, 2012. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. Optional forms of benefits are also available.

N. Death in the Line of Duty

Eligibility: All members who die as a result of an act occurring in the performance of service for the City are eligible for survivor benefits regardless of Credited Service.

Benefit: For members eligible for normal retirement as of September 30, 2012, the spouse will be paid 2/3 of the member's accrued Normal Retirement Benefit calculated using the greater of service credited on the date of death or 25 years. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible child.

For members not eligible for normal retirement as of September 30, 2012, the spouse will be paid a 10 year term certain annuity in the amount of the member's accrued Normal Retirement Benefit calculated using the greater of service credited on the date of death or 25 years. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible child.

Normal Form of Benefit: For members eligible for normal retirement as of September 30, 2012, single life annuity paid for the life of the spouse. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

For members not eligible for normal retirement as of September 30, 2012, a 10 year term certain annuity payable to the spouse or the member's estate. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

O. Other Pre-Retirement Death

Eligibility: All members are eligible for survivor benefits regardless of Credited Service.

Benefit: For members eligible for normal retirement as of September 30, 2012, the spouse will be paid 2/3 of the member's benefit calculated using the following formula: 2.5% of the member's FAC multiplied by years of Credited Service up to a maximum of 40 years. If the member was already eligible for Normal Retirement, the benefit accrual rate utilized will be 3.0% with a maximum benefit of 100% of FAC. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's benefit amount will be equally shared by each eligible child.

For members not eligible for normal retirement as of September 30, 2012, the spouse or member's estate will be paid a 10 year term certain annuity in the amount of the member's benefit calculated using the following formula: 2.5% of the member's FAC multiplied by years of Credited Service up to a maximum of 40 years. If the member was already eligible for Normal Retirement, the benefit accrual rate utilized will be 3.0% with a maximum benefit of 100% of FAC. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary.

Normal Form

of Benefit: For members eligible for normal retirement as of September 30, 2012, single life annuity paid for the life of the spouse. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

For members not eligible for normal retirement as of September 30, 2012, a 10 year term certain annuity payable to the spouse or the member's estate. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student.

COLA: For members eligible for normal retirement as of September 30, 2012, each surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year.

For members not eligible for normal retirement as of September 30, 2012, each surviving beneficiary will receive a 3.2% increase in benefits attributable to service performed prior to October 1, 2012 at the end of each February. For benefits attributable to service performed on or after October 1, 2012, each surviving beneficiary will receive a 1.0% increase in benefits starting after the deceased member would have otherwise attained age 65 at the end of February of each year. The adjustment will be prorated if the member retired or would have reached age 65 during the preceding calendar year.

P. Post Retirement Death

Benefit determined by the form of benefit elected upon retirement.

Q. Optional Forms

In lieu of electing the Normal Form of benefit, the optional forms of benefits available to all retirees are a Single Life Annuity or the 50%, 66 2/3%, 75% and 100% Joint and Survivor options.

R. Vested Termination

Eligibility: A member has earned a non-forfeitable right to Plan benefits after the completion of 10 years of Credited Service.

Benefit: The benefit is the member's accrued Normal Retirement Benefit as of the date of termination. Benefit begins at age 55. Alternatively, members can elect a reduced Early Retirement benefit any time after age 50. If the terminated member dies prior to retirement, payments to beneficiaries under the Normal Form will commence when the member would have reached age 50.

Normal Form

of Benefit: For members eligible for normal retirement as of September 30, 2012, a lifetime annuity with automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death. Spousal benefits are payable for life. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. If there is no spouse, 2/3 of the retiree's pension amount will be equally shared by each eligible

child. Children's benefits terminate upon death, attainment of age 18, or attainment of age 23 if a full time student. Optional forms of benefits are also available.

For members not eligible for normal retirement as of September 30, 2012, a lifetime annuity automatic continuation of 2/3 of the pension payable to the spouse upon the retiree's death for benefits attributable to service performed prior to October 1, 2012, and a 10 year certain and life thereafter annuity for benefits attributable to service performed after September 30, 2012. During periods when a spouse is paid, each eligible child is also paid 5% of the deceased member's last monthly salary. Optional forms of benefits are also available.

COLA: For members eligible for normal retirement as of September 30, 2012, each retiree and surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year.

For members not eligible for normal retirement as of September 30, 2012, each retiree and surviving beneficiary will receive a 3.2% increase in benefits attributable to service performed prior to October 1, 2012 at the end of each February. For benefits attributable to service performed on or after October 1, 2012, each retiree and surviving beneficiary will receive a 1.0% increase in benefits starting after attainment of age 65 at the end of February of each year. The adjustment will be prorated if the member retired or attained age 65 during the preceding calendar year.

S. Refunds

Eligibility: All members terminating employment with less than 10 years of Credited Service are eligible. Optionally, vested members (those with 10 or more years of Credited Service) may elect a refund in lieu of the vested benefits otherwise due.

Benefit: Refund of the member's contributions with interest. The current rate of interest is 5% annually.

T. Member Contributions

8% of Compensation

U. Employer Contributions

The required City contribution is the amount determined by the actuary needed to fund the plan properly according to State laws. The minimum required City contribution is 8% of compensation.

V. Cost of Living Increases

COLA applies to all benefit recipients (Normal Retirement, Early Retirement, Disability, Death and Vested Termination).

COLA: For members eligible for normal retirement as of September 30, 2012, and for all service-connected disabilities regardless of normal retirement eligibility status, each retiree and surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year.

For members not eligible for normal retirement as of September 30, 2012, except for service-connected disabilities, each retiree and surviving beneficiary will receive a 3.2% increase in benefits attributable to service performed prior to October 1, 2012 at the end of each February. For benefits attributable to service performed on or after October 1, 2012, each retiree and surviving beneficiary will receive a 1.0% increase in benefits starting after attainment of age 65 at the end of February of each year. The adjustment will be prorated if the member retired or attained age 65 during the preceding calendar year.

W. 13th Check

Not Applicable

X. Deferred Retirement Option Plan

Eligibility: Plan members who meet one of the following criteria are eligible for the DROP:

- (1) age 50 with 10 years of Credited Service, or
- (2) 25 years of Credited Service regardless of age.

Members who meet eligibility must submit a written election to participate in the DROP.

Benefit: The member's Credited Service and FAC are frozen upon entry into the DROP. The monthly retirement benefit as described under Normal Retirement is calculated based upon the frozen Credited Service and FAC.

**Maximum
DROP Period:** 60 months

**Interest
Credited:** The member's DROP account is credited at a rate equal to 2.5% per annum compounded quarterly, effective October 1, 2012. This was changed from 6.5% per annum compounded quarterly prior to October 1, 2012.

**Normal Form
of Benefit:** Lump Sum

COLA: For members eligible for normal retirement as of September 30, 2012, each retiree and surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year.

For members not eligible for normal retirement as of September 30, 2012, each retiree and surviving beneficiary will receive a 3.2% increase in benefits attributable to service performed prior to October 1, 2012 at the end of each February. For benefits attributable to service performed on or after October 1, 2012, each retiree and surviving beneficiary will receive a 1.0% increase in benefits starting after attainment of age 65 at the end of February of each year. The adjustment will be prorated if the member retired or attained age 65 during the preceding calendar year.

Y. Other Ancillary Benefits

There are no ancillary retirement type benefits not required by statutes but which might be deemed a City of Sarasota Police Officers' Pension Fund liability if continued beyond the availability of funding by the current funding source.

Z. Changes from Previous Valuation

None.

SECTION D

THE ACTUARIAL VALUATION PROCESS SUMMARY OF ACTUARIAL ASSUMPTIONS AND DEFINITIONS OF TECHNICAL TERMS

The Actuarial Valuation Process

An actuarial valuation is the mathematical process by which a pension plan contribution requirement is determined and its actuarial condition is measured.

The flow of activity constituting the valuation may be summarized as follows:

- A. ***Covered Person Data***, furnished by the plan administrator including:
 - Retired participants and beneficiaries now receiving benefits
 - Former participants with vested benefits not yet payable
 - Active participants
 - B. + ***Asset Data*** (cash & investments), furnished by the plan administrator
 - C. + ***Fund Description Data***, furnished by the plan administrator
 - D. + ***Assumptions about various future activities of the plan*** (risk elements)
 - E. + ***The Actuarial Cost Method*** for allocating costs to time periods and determining the long-term planned pattern for employer contributions
 - F. + ***Mathematically combining the Data, the Estimates of Future Activities, and the Cost Method***
 - G. = Determination of:
 - Employer Contribution Requirement and Actuarial Condition
-

Items A, B and C constitute the current “knowns” about the Fund. A good deal of plan activity which will result in benefit payments has yet to occur. Accordingly, certain assumptions must be made about future plan activity. These assumptions (Item D) may be classified as demographic or fiscal. Demographic assumptions include future mortality rates, disability rates, rates of pre-retirement withdrawal from employment, and retirement ages. Fiscal assumptions consist of future salary increases and rates of investment return.

Demographic assumptions are generally selected on the basis of the Fund's historical activity, modified for expected future differences. Past activity of plans which are similar in nature to the plan being valued may be utilized if plan data or activities are insufficient to be reliable.

Fiscal assumptions, on the other hand, do not lend themselves to prediction on the basis of historical activity -- the reason being that both salary increases and investment return are impacted by inflation. Inflation defies reliable prediction. Fiscal assumptions are generally selected on the basis of what would be expected to occur in an inflation-free environment and then both are increased by some provision for long-term inflation.

This is a case where two wrongs may make a right. If inflation is higher than expected it will probably result in actual rates of salary increase and investment return which exceed the assumed rates. Salaries increasing faster than expected result in unexpected costs. Investment return exceeding the assumed rate result in unanticipated assets. To a large degree the additional assets will offset the additional cost over the long-term.

Once items A, B, C and D are available, the actuarial valuation process begins. The first step is to determine the plan's **total actuarial present value** for individuals in each of the 3 covered person categories.

Retired participants now receiving monthly payments;
Vested terminated participants not yet at retirement age;
Active participants.

The actuarial present value is the value today after taking into account the probabilities of payment and the effect of time, of plan promises to pay benefits in the future on the basis of both service already completed and projected future service.

The total actuarial present value is allocated between projected future service and completed service by the actuarial cost method (Item E) -- the ***individual entry age*** method being utilized for this valuation. The portion of the total actuarial present value allocated to projected future service is the ***actuarial present value of future normal costs*** -- normal cost being the series of annual costs, from entry age to retirement age, which will accumulate to the actuarial present value of the individual's benefit at the time of retirement or death. The remainder of the total actuarial present value is the ***actuarial accrued liability***.

At this stage determination has been made of:

1. The total actuarial present value;
2. The actuarial present value of future normal cost; and
3. The actuarial accrued liability.

In the typical plan, the actuarial accrued liability may not be covered by the plan's accrued assets -- leaving an ***unfunded actuarial accrued liability***.

The next step in the valuation process is a determination of the contribution rate (Item G) required to support Fund benefits in accordance with the funding objective (page B-1).

The contribution rate is determined in two basic components:

1. The normal cost component; and
2. The component which will finance (pay off) the unfunded actuarial accrued liability over the periods indicated on page B-8.

The unfunded actuarial accrued liability is being amortized as a level dollar amount.

The actuarial estimates regarding the Inflation rate, Real Investment Return rate, and Salary Increase rates are used, in combination with the other estimates, to (i) determine the present value of amounts expected to be paid in the future and (ii) establish rates of contribution which are expected to remain relatively level as a percent of total valuation payroll. The interest for the valuation was 6.5% a year compounded annually. It is composed of inflation and real investment return.

INFLATION RATE. 2.30% per annum, compounded annually, effective 9/30/18. This is the rate at which growth in the supply of money and credit is estimated to exceed growth in the supply of goods and services. It may be thought of as the rate of depreciation of the purchasing power of the dollar. There are a number of indices for measuring the inflation rate. The recent inflation rate as measured by the Consumer Price Index is shown in a table which follows.

REAL INVESTMENT RETURN RATE. 4.2% per annum, compounded annually, net of investment expenses. This is the rate of return estimated to be produced by investing a pool of assets in an inflation-free environment. Recent real rates of investment return on the funding value of assets are shown in a table which follows.

SALARY INCREASE RATES. Participant salaries are estimated to increase between the date of hire and date of retirement. Salary increases occur in recognition of (i) seniority and longevity, (ii) inflation-related depreciation of the purchasing power of salaries, and (iii) promotion and competition from other employers for personnel. A schedule of rates of increases in individual salaries for sample ages follows:

Years of Service at Valuation Date	Salary Increase Rates		
	% Increase in Salary		
	Merit and Seniority	Inflation	Total Increase
0	17.0%	2.3%	19.3%
1	8.5	2.3	10.8
2	7.5	2.3	9.8
3	4.2	2.3	6.5
4 - 9	3.6	2.3	5.9
10 - 14	3.4	2.3	5.7
15 - 19	3.2	2.3	5.5
20 +	2.9	2.3	5.2

The valuation is based on the number of active participants remaining constant, and the total payroll for the group increasing at the rate of 2.5% a year (the estimated increase in wage levels due to inflation).

A schedule of recent salary change experience is shown in the following table:

Year Ended 9/30	Rate of Inflation		Rate of Inv. Return		Real Rate of Inv. Return		Salary Increases	
	A	E	A	E	A	E	A	E
1992	2.9 %	5.0 %	8.9 %	8.0 %	6.0 %	3.0 %	10.3 %	6.3 %
1993	2.7	5.0	9.4	8.0	6.7	3.0	6.8	6.2
1994	3.0	5.0	7.4	8.0	4.4	3.0	6.6	5.9
1995	2.6	4.5	11.2	8.0	8.6	3.5	3.1	5.5
1996	3.0	4.5	12.9	8.0	9.9	3.5	6.0	5.3
1997	2.2	4.5	17.2	8.0	15.0	3.5	5.8	5.3

1999	2.6	4.5	14.8	8.0	12.2	3.5	6.7	5.9
2000	3.5	4.5	12.5	8.0	9.0	3.5	11.4	5.7
2001	2.6	4.5	4.4	8.0	1.8	3.5	2.4	5.8
2002	1.5	4.5	0.4	8.0	(1.1)	3.5	4.4	5.7
2003	2.3	3.1	(0.7)	8.0	(3.0)	4.9	6.1	5.9
2004	2.5	3.1	0.0	8.0	(2.5)	4.9	2.8	5.9
2005	4.7	3.1	9.0	8.0	4.3	4.9	12.7	5.7
2006	2.1	3.1	9.1	8.0	7.0	4.9	4.5	5.7
2007	2.8	3.1	10.7	8.0	7.9	4.9	7.6	5.7
2008	4.9	3.1	6.4	8.0	1.5	4.9	4.4	5.7
2009	(1.3)	3.1	4.8	8.0	6.1	4.9	3.1	5.7
2010	1.1	3.1	4.1	8.0	3.0	4.9	4.2	5.5
2011	3.9	3.1	2.3	8.0	(1.6)	4.9	4.4	5.5
2012	2.2	3.1	2.5	7.8	0.3	4.7	(0.5)	5.6
2013	1.2	2.5	7.1	7.0	5.9	4.5	5.0	5.5
2014	1.7	2.5	9.7	7.0	8.0	4.5	7.8	5.7
2015	0.0	2.5	8.3	7.0	8.3	4.5	5.0	5.6
2016	1.5	2.5	10.0	7.0	8.5	4.5	9.9	5.9
2017	2.2	2.5	9.3	7.0	7.1	4.5	13.5	5.7
2018	2.3	2.5	8.8	7.0	6.5	4.5	(1.7)	5.5
2019	1.7	2.3	7.2	7.0	5.5	4.7	6.3	6.8
2020	1.4	2.3	9.0	7.0	7.6	4.7	11.4	6.6
2021	5.4	2.3	11.8	6.75	6.4	4.45	3.2	6.5
2022	8.2	2.3	5.3	6.5	(2.9)	4.2	12.1	6.3
2023	3.7	2.3	5.3	6.5	1.6	4.2	14.1	10.3
2024	2.4	2.3	8.6	6.5	6.2	4.2	11.1	6.6
Averages	2.6	3.4	7.9	7.6	5.3	4.2	6.5	6.0

The mortality tables are based on the PUB-2010 Headcount Weighted Mortality Tables described below, with mortality improvements projected for healthy lives to all future years after 2010 using Scale MP-2018. No mortality improvement is projected for disabled lives.

	Pre-Retirement PUB-2010 Table	Post-Retirement PUB-2010 Table
Female Healthy	Headcount Weighted Safety Employee Female Table, set forward 1 year	Headcount Weighted Safety Healthy Retiree Female Table, set forward 1 year
Male Healthy	Headcount Weighted Safety Below Median Employee Male Table, set forward 1 year	Headcount Weighted Safety Below Median Healthy Retiree Male Table, set forward 1 year
Female Disabled	N/A	80% Headcount Weighted General Disabled Retiree Female Table; 20% Headcount Weighted Safety Disabled Retiree Female Table
Male Disabled	N/A	80% Headcount Weighted General Disabled Retiree Male Table; 20% Headcount Weighted Safety Disabled Retiree Male Table

These are the same rates as used by the Florida Retirement System (FRS) in their July 1, 2023 Actuarial Valuation Report for Special Risk class members. Florida Statutes Chapter 112.63(1)(f) mandates the use of the mortality tables used in either of the two most recently published actuarial valuation reports of FRS.

FRS Healthy Post-Retirement Mortality for Special Risk Class Members

Sample Attained Ages (in 2024)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	0.42 %	0.19 %	32.78	36.61
55	0.54	0.35	28.01	31.57
60	0.90	0.59	23.40	26.77
65	1.30	0.91	19.10	22.22
70	2.06	1.42	15.06	17.95
75	3.47	2.36	11.44	14.01
80	6.13	4.04	8.34	10.52

This assumption is used to measure the probabilities of each benefit payment being made after retirement.

FRS Healthy Pre-Retirement Mortality for Special Risk Class Members

Sample Attained Ages (in 2024)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	0.16 %	0.10 %	35.91	39.81
55	0.25	0.16	30.82	34.66
60	0.42	0.22	25.86	29.58
65	0.68	0.30	21.08	24.56
70	1.16	0.54	16.53	19.64
75	2.04	1.04	12.27	14.93
80	6.13	4.04	8.34	10.52

This assumption is used to measure the probabilities of active members dying before retirement.

FRS Disabled Mortality for Special Risk Class Members

Sample Attained Ages (in 2024)	Probability of Dying Next Year		Future Life Expectancy (years)	
	Men	Women	Men	Women
50	1.45 %	1.25 %	24.04	26.84
55	1.91	1.50	20.88	23.54
60	2.37	1.81	17.92	20.32
65	3.00	2.22	15.07	17.17
70	3.91	2.90	12.39	14.10
75	5.30	4.13	9.87	11.22
80	7.66	6.21	7.60	8.67

This assumption is used to measure the probabilities of post-disabled retirees.

RATES OF SEPARATION FROM ACTIVE MEMBERSHIP. The rates do not apply to participants eligible to retire and do not include separation on account of death or disability. Separation rates are used to measure the probabilities of participants separating from employment prior to becoming eligible for retirement.

Sample Ages	Years of Service	% of Active Members Separating Within Next Year
ALL	Under 1	15.0 %
	1	10.0
	2 - 4	6.0
25	5+	4.0
30		4.0
35		3.6
40		1.9
45		0.8
50		0.6
55		0.6
60		0.6

RATES OF DISABILITY. Disability rates measure the probabilities of active participants becoming disabled.

Sample Ages	Percent Becoming Disabled Within Next Year
20	0.25%
25	0.26
30	0.32
35	0.40
40	0.53
45	0.89
50	1.75
55	2.71

Seventy-five percent of disabilities are assumed to be service connected.

RATES OF RETIREMENT. Rates of retirement are used to measure the probabilities of an eligible member retiring during the next year.

	Age				
	Under 49	49	50	51 - 56	57
10 - 24	0%	0%	50%	10%	100%
25	70%	80%	80%	80%	100%
26 - 29	35%	35%	35%	35%	100%
30	100%	100%	100%	100%	100%

EXPENSES. Non-investment related expenses are included as an additional employer contribution to provide for reimbursement of these expenses. Such expenses are assumed to be the amount paid in the preceding year.

ACTIVE MEMBER GROUP SIZE. The valuation was based on a constant active member group size.

MARITAL STATUS. Ninety percent of active participants who meet the age and service requirements for pre-retirement survivor benefits are estimated to be married. Female spouses are assumed to be 3 years younger than the male participant. Male spouses are assumed to be 3 years older than the female participant.

COST OF LIVING ADJUSTMENT. For members eligible for normal retirement as of September 30, 2012, and all service-connected disabilities, each retiree and surviving beneficiary will receive a 3.2% increase in benefits at the end of February of each year. The adjustment will be prorated if the member retired during the preceding calendar year. For members not eligible for normal retirement as of September 30, 2012, each retiree and surviving beneficiary will receive a 3.2% increase in benefits attributable to service performed prior to October 1, 2012 at the end of each February. For benefits attributable to service performed on or after October 1, 2012, each retiree and surviving beneficiary will receive a 1.0% increase in benefits starting after attainment of age 65 at the end of February of each year. The adjustment will be prorated if the member retired or attained age 65 during the preceding calendar year.

ASSET VALUATION METHOD. Smoothed market value where the difference between actual and expected returns is recognized over five years.

Assumed rates of salary increase, retirement, and withdrawal rates were most recently revised effective September 30, 2018 based on a 6-year experience study. Please see the Assumption Study and Experience Review for the Six-Year Period Ending September 30, 2017, dated August 30, 2018 for additional information on these assumptions.

Definitions of Technical Terms

Accrued Service. Service credited under the system which was rendered before the date of the actuarial valuation.

Actuarial Accrued Liability. The difference between the actuarial present value of future benefit payments and the actuarial present value of future normal costs. Also referred to as “accrued liability” or “past service liability.”

Actuarial Assumptions. Estimates of expected future experience with respect to rates of mortality, disability, turnover, retirement, rate or rates of investment income and salary increases. Decrement estimates (rates of mortality, disability, turn-over and retirement) are generally based on past experience, often modified for projected changes in conditions. Economic estimates (salary increases and investment income) consist of the underlying rates in an inflation-free environment plus a provision for a long-term average rate of inflation.

Actuarial Cost Method. A mathematical budgeting procedure for allocating the dollar amount of the “actuarial present value of future benefit payments” between future normal costs and actuarial accrued liability. Sometimes referred to as the “actuarial valuation cost method.”

Actuarial Equivalent. A single amount or series of amounts of equal actuarial present value to another single amount or series of amounts, computed on the basis of appropriate actuarial assumptions.

Actuarial Present Value. The amount of funds currently required to provide a payment or series of payments in the future. It is determined by discounting future payments at predetermined rates of interest, and by probabilities of payment. Also referred to as “present value.”

Amortization. Paying off an interest-discounted amount with periodic payments of interest and principal -- as opposed to paying it off with a lump sum payment.

Experience Gain (Loss). The difference between actual actuarial costs and assumed actuarial costs -- during the period between two valuation dates.

Funding Value of Assets. The value of assets derived by spreading the difference between actual and expected returns in equal dollar installments over five years. This treatment removes the timing of investment activities from the valuation process.

Normal Cost. The actuarial cost allocated to the current year by the actuarial cost method. Sometimes referred to as “current service cost.”

Unfunded Actuarial Accrued Liability. The difference between actuarial accrued liability and the actuarial value of system assets. Sometimes referred to as “unfunded past service liability,” “unfunded accrued liability” or “unfunded supplemental present value.”

Most retirement systems have unfunded actuarial accrued liability. It arises each time new benefits are added and each time an experience loss is realized.

The existence of unfunded actuarial accrued liability is not in itself bad, any more than a mortgage on a house is bad. Unfunded actuarial accrued liability does not represent a debt that is payable today. What is important is the ability to control the amount of unfunded actuarial accrued liability and the trend in its amount (after due allowance for devaluation of the dollar).

* These figures are estimates only. Actual figures will be provided after the end of the fiscal year.

NOTES TO SCHEDULE OF THE EMPLOYER'S NET PENSION LIABILITY

GASB Statement No. 67

Valuation Date: September 30, 2024

Measurement Date: September 30, 2025

Methods and Assumptions Used to Determine the Net Pension Liability:

Actuarial Cost Method Entry Age Normal

Inflation 2.3%

Salary Increases 5.2% to 19.3% depending on service, including inflation

Investment Rate of Return 6.50%

Retirement Age Experience-based table of rates that are specific to the type of eligibility condition

Mortality The same versions of Pub-2010 Headcount-Weighted Mortality Tables as used by the Florida Retirement System (FRS) for Special Risk Class members in their July 1, 2023 actuarial valuation (with mortality improvements projected to all future years after 2010 using Scale MP-2018). Florida Statutes Chapter 112.63(1)(f) mandates the use of mortality tables from one of the two most recently published FRS actuarial valuation reports.

Notes See Discussion of Valuation Results in section A.

SCHEDULE OF CONTRIBUTIONS

GASB Statement No. 67

<u>FY Ending September 30,</u>	<u>Actuarially Determined Contribution</u>	<u>Actual Contribution</u>	<u>Contribution Deficiency (Excess)</u>	<u>Covered Payroll</u>	<u>Actual Contribution as a % of Covered Payroll</u>
2016	\$ 9,120,631	\$ 9,216,500	\$ (95,869)	\$ 10,873,428	84.76%
2017	9,848,538	9,848,538	-	12,737,375	77.32%
2018	8,188,760	8,188,760	-	11,838,600	69.17%
2019	7,834,538	7,834,538	-	12,632,276	62.02%
2020	7,997,559	7,997,559	-	14,255,899	56.10%
2021	7,224,811	7,237,371	(12,560) *	13,649,746	53.02%
2022	7,311,822	7,311,208	614 *	14,879,572	49.14%
2023	8,050,295	8,076,525	(26,230)	16,990,914	47.53%
2024	9,313,592	9,443,871	(130,279)	18,884,006	50.01%
2025**	9,277,700	9,277,700	-	19,000,000	48.83%

* Note: the (Excess) contribution made during the fiscal year ended September 30, 2021 is more than sufficient to offset the small deficiency during the fiscal year ended September 30, 2022.

**** These figures are estimates only. Actual figures will be provided after the end of the fiscal year.**

NOTES TO SCHEDULE OF CONTRIBUTIONS

GASB Statement No. 67

Valuation Date: September 30, 2023
Notes Actuarially determined contribution rates are calculated as of the September 30th which is two years prior to the end of the fiscal year in which contributions are reported.

Methods and Assumptions Used to Determine Contribution Rates:

Actuarial Cost Method	Entry Age Normal
Amortization Method	Level Percentage of Payroll, Closed
Remaining Amortization Period	15 years (Single equivalent amortization period)
Asset Valuation Method	5-year smoothed market
Inflation	2.3%
Salary Increases	5.2% to 19.3% depending on service, including inflation
Investment Rate of Return	6.5%
Retirement Age	Experience-based table of rates that are specific to the type of eligibility condition
Mortality	The same versions of Pub-2010 Headcount-Weighted Mortality Tables as used by the Florida Retirement System (FRS) for Special Risk Class members in their July 1, 2022 actuarial valuation (with mortality improvements projected to all future years after 2010 using Scale MP-2018). Florida Statutes Chapter 112.63(1)(f) mandates the use of mortality tables from one of the two most recently published FRS actuarial valuation reports.

Other Information:

Notes Please see Discussion of Valuation Results in the September 30, 2023 Actuarial Valuation Report.

SINGLE DISCOUNT RATE AND SENSITIVITY ANALYSIS

GASB Statement No. 67

A single discount rate of 6.5% was used to measure the total pension liability. This single discount rate was based on the expected rate of return on pension plan investments of 6.5%. The projection of cash flows used to determine this single discount rate assumed that plan member contributions will be made at the current contribution rate and that employer contributions will be made at rates equal to the difference between the total actuarially determined contribution rates and the member rate. Based on these assumptions, the pension plan's fiduciary net position was projected to be available to make all projected future benefit payments of current plan members. Therefore, the long-term expected rate of return on pension plan investments (6.5%) was applied to all periods of projected benefit payments to determine the total pension liability.

Regarding the sensitivity of the net pension liability to changes in the single discount rate, the following presents the plan's net pension liability, calculated using a single discount rate of 6.5%, as well as what the plan's net pension liability would be if it were calculated using a single discount rate that is 1-percentage-point lower or 1-percentage-point higher:

Sensitivity of the Net Pension Liability to the Single Discount Rate Assumption*

1% Decrease	Current Single Discount Rate Assumption	1% Increase
5.50%	6.50%	7.50%
\$56,973,039	\$11,669,162	(\$25,639,452)

* These figures are estimates only. Actual figures will be provided after the end of the fiscal year.

SECTION F

SUMMARY OF VALUATION RESULTS IN STATE FORMAT

Summary of Valuation Results in State Format - (\$ amounts in thousands)

	<u>September 30, 2024</u>	<u>September 30, 2023</u>
(a) Participant Data		
(i) Active participants		
- number	173	170
- annual payroll	\$19,482	\$17,522
(ii) Retired participants & beneficiaries		
- number	210	209
- annualized benefit payroll	\$15,727	\$15,276
(iii) Disabled participants		
- number	33	32
- annualized benefit payroll	\$2,146	\$2,014
(iv) Terminated vested participants		
- number	6	6
- annualized benefit payroll	\$184	\$184
(b) Assets		
(i) Funding value	\$313,921	\$295,675
(ii) Market value	329,863	279,695
(c) Actuarial Liabilities		
(i) Actuarial present value of active partic. benefits		
normal & early retirement	114,402	102,502
termination benefits - pensions	4,190	3,801
disability retirement	15,867	14,440
survivor benefits (pre-retirement)	834	764
termination benefits - refunds	697	645
Total	<u>135,990</u>	<u>122,152</u>
(ii) Actuarial present value of terminated vested participant benefits	2,654	2,485
(iii) Actuarial present value of retired partic. & beneficiary:		
normal/early retirement & survivors (excl. disability)	229,988	228,529
disability retirement & survivors	31,928	30,336
Total	261,916	258,865
(iv) Total actuarial present value of future benefit payments	400,560	383,502
(v) Payables	0	0
(vi) Actuarial accrued liability	344,771	332,756
(vii) Unfunded actuarial accrued liability (1)	30,850	37,081

(1) Refer to page B-8 for requested detail.

	<u>September 30, 2024</u>	<u>September 30, 2023</u>
(d) Actuarial Present Value of Accrued Benefits (calculated in accordance with FASB Statement 35)		
(i) Vested accrued benefits		
Retired participants and beneficiaries	\$ 261,916	\$ 258,865
Terminated participants	2,654	2,485
Active participants (includes non-forfeitable accum. partic. Contributions of \$15,588 and \$13,980)	58,431	52,805
Total	323,001	314,155
(ii) Non-vested accrued benefits	7,623	6,000
(iii) Total actuarial present value of accrued benefits	330,624	320,155
(iv) Actuarial p.v. of accrued benefits at beginning of year	320,155	311,969
(v) Changes attributable to:		
Amendments	0	0
Assumption change	0	0
Operation of decrements	28,319	25,435
Benefit payments (net basis)	(17,850)	(17,249)
(vi) Net Change	10,469	8,186
(vii) Actuarial p.v. of accrued benefits at end of year	330,624	320,155
(e) Plan costs for fiscal years beginning October 1, 2025 and October 1, 2024*		
(i) Normal costs		
Service Pensions	23.46 %	23.55 %
Disability pensions	6.95	6.98
Survivor pensions (pre-retirement)	0.37	0.38
Deferred service pensions	1.70	1.72
Refunds of member contributions	0.66	0.66
Total normal cost	33.14	33.29
(ii) Payment to amortize unfunded act. accr. liab.	17.91	22.09
(iii) Administrative expenses	1.59	1.45
(iv) Amount to be paid by participants	8.00	8.00
(v) Expected plan sponsor contribution		
% of payroll	44.64 %	48.83 %
Estimated dollars (minimum of 8% of payroll)	\$ 8,914	\$ 8,770

* Plan costs are displayed as a percentage of covered payroll. The covered payroll for the fiscal years beginning 10/1/2024 and 10/1/2023 is \$19,482,193 and \$17,522,311, respectively. The estimated covered payroll for the fiscal year beginning 10/1/2025 is \$19,969,248.

		<u>September 30, 2024</u>	<u>September 30, 2023</u>
(f)	Past Contributions (fiscal year ending 9/30/24 & 23)		
(i)	Required minimum:		
	Fund sponsor (including Chapter 185)	\$ 9,314	\$ 8,050
	Participants	<u>1,511</u>	<u>1,359</u>
	Total	10,825	9,409
(ii)	Actual:		
	Fund sponsor	8,573	7,266
	Chapter 185 taxes	871	810
	Participants	<u>1,511</u>	<u>1,359</u>
	Total	10,955	9,435
(g)	Net Experience Gain (Loss)	4,245	(5,904)
(h)	Other Disclosures		
(i)	Present value of active member future salaries		
	from attained age	\$ 182,239	\$ 165,248
	from entry age	Not applicable to individual EANC method	
(ii)	Present value of active member future contributions		
	from attained age	\$ 14,579	\$ 13,220
	from entry age	Not applicable to individual EANC method
